CH-Alpha® SPORT is especially developed to promote health and fitness of active people and athletes. It contains a tri-complex of FORTIGEL®, magnesium and silicic acid.

**All good things come in threes**

**Collagen Peptides FORTIGEL®**
- **Unique bioavailability**
- Demonstrated to activate collagen regeneration in joint cartilage

**Magnesium**
- For normal muscle and bone function
- Improves athletic performance – even when there is no deficiency

**Silicic acid**
- Strengthens bones, cartilage, tendons and ligaments
- Improves the synthesis of collagen, glycosaminoglycans and mucopolysaccharides in connective tissue and bones

**Support regeneration**

The active principle of Collagen Peptides FORTIGEL®

Joint cartilage consists of 95% collagen and proteoglycans. FORTIGEL® stimulates the production of these major components and supports regeneration of joint cartilage.

Science backs CH-Alpha®

CH-Alpha® positively affects the production of cartilage

Athletes attest a decrease of movement pain³

- Study conducted at the Olympic Training Center Rhine-Ruhr, Germany
- 88 athletes from various age and performance groups
- All were suffering from knee, hip or shoulder joint pain
- Duration: One vial per day for 12 weeks

Promote performance

Magnesium: Proven to increase performance⁹

Effectiveness of a three-month fitness programme with and without magnesium supplementation

- Increased performance capacity
- Increase in running speed
- Increase in manual force

Silicic acid: Known for strengthening the locomotor system¹⁰

- Improves collagen synthesis
- Strengthens ligaments and tendons
- Promotes bone calcification
